

# COMPETENCE CENTER

## Multi Utility / Supply & Disposal Industry

The key task of the supply and disposal industry is to guarantee the efficient and environmentally correct use of natural resources. This requires manifold, specific, cross-functional knowledge.

With our expertise, we support municipal and private water suppliers, swimming baths, waste and wastewater disposal companies, landfill operators and authorities in mastering these demanding and complex tasks.

An expert, interdisciplinary team of chemists, engineers, geoscientists, biologists and public health experts supports our customers as an independent and acknowledged partner. Our service spectrum includes carrying out routine tasks as well as preparing and implementing special solutions. Together with our partners in the supply and disposal economy we want to achieve the highest standards in quality and safety in fulfilling all of these tasks in the interests of the consumer.

### OUR RANGE OF SERVICES:

#### High quality analytics for water, solids and gases

#### Monitoring, quality assurance and quality management for

- Ground water
- Drinking and bathing water
- Technical water
- Wastewater
- Waste and landfill sites

#### Expert opinions and consulting

- Fault and damage assessment
- Process optimisation

#### Project management

#### Drawing up cadastres

#### Monitoring concepts

#### International environmental projects

We work on international environmental projects together with our partners world-wide. Our experts work for international organisations and government authorities in many different ways, prepare studies and analyses, draw up concepts for resolving problems and assist in the practical implementation of these concepts. The decisive factor for us is to offer and implement solutions that are geared to the specific problems of our customers.
